

from the time Washington received the news of the consummation of the French Alliance in 1778 to his retirement as a private citizen in 1783. The work is an excellent combination of the stories of many of the great and not-so-great men of the times, a history of the Continental Congress during the Revolution, and a military history of the period. One-third of the volume is devoted to the Yorktown campaign. The carefully documented story of Benedict Arnold is also included.

## ECONOMICS

**ESSAYS IN ECONOMICS.** By A. C. Pigou. (New York: St. Martin's Press, 1952. 241 pages and Preface, \$3.00.)

A representative selection of 18 essays written during the past 10 years by one of the Western World's outstanding economists. In a sense Pigou bridges the span of years between the Classical Economists and the economic theorists born of the depression, since for the past 30 years he taught political economy at Cambridge. Written in a lively style, the topics range from the gold reserve to men and women's wages, from the Beveridge White Paper on Full Employment to the differences between economics 50 years ago and today, from central planning to Mill's Wage Fund theory. Even the casual reader of economics will derive both pleasure and edification from the pieces. After his sprightly dissection of those who write reviews on economic books, the defense can do naught save recommend heartily this particular volume.

**THE DEVELOPMENT OF ECONOMIC THOUGHT.** Edited by Henry William Spiegel. (New York: John Wiley & Sons, Inc., 1952. 794 pages and Index, \$6.50.)

An excellent idea, brilliantly executed. Here 32 great economists are discussed by 32 prominent economists. One cannot say "32 other economists" because there is interesting doubling-up. Thus we have Keynes discussing the economic theories of Jevons and Samuelson treating Keynes, Marx on the Physiocrats and Veblen on Marx. The earliest beginnings of economic thought are discussed, and the article written by one Aristotle on the economies of one Plato starts the collection. The layman can only wish that economists wrote so easily and brilliantly when discussing economics as they do when discussing their fellow craftsmen.

**INTRODUCTION TO ECONOMIC HISTORY. 1750-1950.** By G. D. H. Cole. (New York: St. Martin's Press, 1952. 190 pages, Statistical Index, Date List, Index, \$2.00.)

This brief study is an excellent introduction to the history of capitalism. G. D. H. Cole examines the development of modern industry and agriculture in England, France and Germany, the United States, the Far East, the U.S.S.R. and the colonial areas of the world. According to this eminent British economist, "the problem of the twentieth century is not primarily economic. . . ." Yet the development of economically backward people is essential to world progress.
